## **AZURE DEVOPS ENVIRONMENT SETUP**

### **Aim:**

To set up and access the Azure DevOps environment by creating an organization through the Azure portal.

### **INSTALLATION**

1. Open your web browser and go to the Azure website: <https://azure.microsoft.com/en-us/get-started/azure-portal>.

Sign in using your Microsoft account credentials.

If you don't have a Microsoft account, you can create one here: <https://signup.live.com/?lic=1>

## 2. Azure home page

Microsoft Azure

## AZURE DEVOPS PROJECT SETUP AND USER STORY MANAGEMENT

### Aim:

To set up an Azure DevOps project for efficient collaboration and agile work management.

### 1. Create An Azure Account

### 2. Create the First Project in Your Organization

- After the organization is set up, you'll need to create your first **project**. This is where you'll begin to manage code, pipelines, work items, and more.
- On the organization's **Home page**, click on the **New Project** button.
- Enter the project name, description, and visibility options:
  - Name:** Choose a name for the project (e.g., **LMS**).
  - Description:** Optionally, add a description to provide more context about the project.
  - Visibility:** Choose whether you want the project to be **Private** (accessible only to those invited) or **Public** (accessible to anyone).
- Once you've filled out the details, click **Create** to set up your first project.

## 4. Project dashboard

The screenshot displays the Azure DevOps interface for a project named 'Patient Tracker Application'. The left sidebar contains a navigation menu with options: Overview, Summary, Dashboards, Wiki, Boards, Repos, Pipelines, Test Plans, and Artifacts. The main content area is titled 'Patient Tracker Application' and includes a search bar, a 'Private' status indicator, and an 'Invite' button. The dashboard is divided into three main sections: 'About this project', 'Project stats', and 'Members'. The 'About this project' section features a placeholder for a project description with a '+ Add Project Description' button and an illustration of a person running. The 'Project stats' section shows '0 Work items created' and '0 Work items completed' for the 'Last 7 days' period, along with a '0% Builds succeeded' indicator. The 'Members' section lists four team members: DM, HU, AT, and AM, each represented by a colored circle.

5. To manage user stories:

a. From the **left-hand navigation menu**, click on **Boards**. This will take you to the main **Boards** page, where you can manage work items, backlogs, and sprints.

b. On the **work items** page, you'll see the option to **Add a work item** at the top. Alternatively, you can find a + button or **Add New Work Item** depending on the view you're in. From the **Add a work item** dropdown, select **User Story**. This will open a form to enter details for the new User Story.

Did you notice Azure Boards has a new look and awesome new features? [Learn more.](#)

EXP NO: 3

## SETTING UP EPICS, FEATURES, AND USER STORIES FOR PROJECT PLANNING

### Aim:

To learn about how to create epics, user story, features, backlogs for your assigned project.

### Create Epic, Features, User Stories, Task

The screenshot shows the Azure Boards interface for the 'Patient Tracker Application Team'. The left sidebar contains navigation options: Overview, Boards, Work items, Backlogs (selected), Sprints, Queries, Delivery Plans, Analytics views, Repos, Pipelines, Test Plans, and Artifacts. The main area displays the 'Backlog' view with a table of work items. The table has columns for Order, Work Item Type, Title, State, Effort, Business Value Area, and Tags. The items are organized into four epics: 1. User Management & Authentication (containing 6 items), 2. Patient Record Management (1 item), 3. Monitoring & Notifications (1 item), and 4. Admin Tools, Logging & Reporting (1 item). All items are in the 'New' state.

| Order | Work Item Type | Title                                                       | State | Effort | Business Value Area | Tags |
|-------|----------------|-------------------------------------------------------------|-------|--------|---------------------|------|
| 1     | Epic           | User Management & Authentication                            | New   |        | Business            |      |

|       | Feature        | Role-Based Access Control (RBAC)                            | New   |        | Business            |      |
|       | Feature        | Session & Authentication Security                           | New   |        | Business            |      |
| 2     | Epic           | Patient Record Management                                   | New   |        | Business            |      |
| 3     | Epic           | Monitoring & Notifications                                  | New   |        | Business            |      |
| 4     | Epic           | Admin Tools, Logging & Reporting                            | New   |        | Business            |      |

### 1.Fill in Epics

The screenshot shows the 'Work Items' creation form in Azure Boards. The left sidebar is the same as the previous screenshot. The main area is titled 'Work Items' and shows a 'NEW EPIC' form. The 'Title' field is empty, and a message says 'Field Title cannot be empty.' The 'Area' is set to 'Patient Tracker Application' and the 'Reason' is 'New'. The form has sections for 'Description', 'Discussion', 'Planning', and 'Deployment'. The 'Description' section has a placeholder 'Click to add Description.' The 'Discussion' section has a placeholder 'Add a comment. Use # to link a work item, @ to mention a person, or ! to link a pull request.' The 'Planning' section has fields for Priority (2), Risk, Effort, Business Value, and Time Criticality. The 'Deployment' section has a message about tracking releases and a link to 'Add link'.

2116231801011

CS23432

## 2.Fill in Features

The screenshot shows the 'New Feature' form in Azure Boards. The left sidebar contains navigation links: Overview, Boards, Work items, Backlogs, Sprints, Queries, Delivery Plans, Analytics views, Repos, Pipelines, Test Plans, and Artifacts. The main area has a title input field with a placeholder 'Enter title' and a validation message 'Field 'Title' cannot be empty.' Below the title is a 'No one selected' message and a '0 Comments' indicator. The form is divided into several sections: 'Description' with a placeholder 'Click to add Description.', 'Discussion' with a placeholder 'Add a comment. Use # to link a work item, @ to mention a person, or ! to link a pull request.', 'Planning' with fields for Priority (2), Risk, Effort, Business Value, and Time Criticality, and 'Deployment' with a placeholder 'Click to add Deployment.' and a 'Details' tab. The 'Add link' section is also visible.

## 3.Fill in User Story Details

The screenshot shows the 'New User Story' form in Azure Boards. The left sidebar contains navigation links: Overview, Boards, Work items, Backlogs, Sprints, Queries, Delivery Plans, Analytics views, Repos, Pipelines, Test Plans, and Artifacts. The main area has a title input field with a placeholder 'Enter title' and a validation message 'Field 'Title' cannot be empty.' Below the title is a 'No one selected' message and a '0 Comments' indicator. The form is divided into several sections: 'Description' with a placeholder 'Click to add Description.', 'Acceptance Criteria' with a placeholder 'Click to add Acceptance Criteria.', 'Discussion' with a placeholder 'Add a comment. Use # to link a work item, @ to mention a person, or ! to link a pull request.', 'Planning' with fields for Story Points, Priority (2), and Risk, and 'Deployment' with a placeholder 'Click to add Deployment.' and a 'Details' tab. The 'Add link' section is also visible.

**Result:**

Thus, the creation of epics, features, user story and task has been created successfully.

Description

Click to add Description.

Acceptance Criteria

- The system must require mandatory fields (name, age, gender, contact, medical history).
- Each patient should have a unique **Patient ID**, preventing duplicate entries.
- Only **doctors** can add new patient records; unauthorized users get an error.
- A success message should appear after saving, and the patient should be visible in the list.
- The record should save within **2 seconds**, with an error message if it fails.
- The system should log **who added the record and when** for tracking.

|------------------|--------------------------------------------|
| <b>EXP NO: 8</b> | <b>TESTING – TEST PLANS AND TEST CASES</b> |
|------------------|--------------------------------------------|

**Aim:**

Test Plans and Test Case and write two test cases for at least five user stories showcasing the happy path and error scenarios in azure DevOps platform.

**Test Planning and Test Case**

**Test Case Design Procedure**

**1. Understand Core Features of the Application**

- User Signup & Login
- Viewing and Managing Playlists
- Fetching Real-time Metadata
- Editing playlists (rename, reorder, record)
- Creating smart audio playlists based on categories (mood, genre, artist, etc.)

**2. Define User Interactions**

- Each test case simulates a real user behaviour (e.g., logging in, renaming a playlist, adding a song).

**3. Design Happy Path Test Cases**

- Focused on validating that all features function as expected under normal conditions.
- Example: User logs in successfully, adds item to playlist, or creates a category-based playlist.

**4. Design Error Path Test Cases**

- Simulate negative or unexpected scenarios to test robustness and error handling.
- Example: Login fails with invalid credentials, save fails when offline, no recommendations found.

**5. Break Down Steps and Expected Results**

- Each test case contains step-by-step actions and a corresponding expected outcome.
- Ensures clarity for both testers and automation scripts.

**6. Use Clear Naming and IDs**

- Test cases are named clearly (e.g., TC01 – Successful Login, TC10 – Save Playlist Fails).
- Helps in quick identification and linking to user stories or features.

**7. Separate Test Suites**

- Grouped test cases based on functionality (e.g., Login, Playlist Editing, Recommendation System).

- Improves organization and test execution flow in Azure DevOps.

## 8. Prioritize and Review

- Critical user actions are marked high-priority.
- Reviewed for completeness and traceability against feature requirements.

### 3. Test case

Give two test cases for at least five user stories showcasing the happy path and error scenarios in azure DevOps platform.

Music Playlist Batch Creator – Test Plans

#### USER STORIES

- As a user, I want to sign up and log in securely so that I can access my playlists (ID: 79).
- As a user, I need to see my playlist in one place (ID: 76).
- As a user, I should be able to create an audio playlist as needed (ID: 73).
- As a user, I should be able to rename, record, and change the playlist (ID: 68).
- As a user, I need to have real-time metadata (ID: 65).

#### Test Suites

##### Test Suit: TS01 - User Login (ID: 86)

###### 1. TC01 – Successful Sign Up

- **Action:**
  - Go to the Sign-Up page.
  - Enter valid name, email, and password.
  - Click "Sign Up".
- **Expected Results:**
  - Sign-Up form is displayed.
  - Fields accept values without error.
  - Account is created, and the user is redirected to the dashboard.
- **Type:** Happy Path

###### 2. TC02 – Secure Login

- **Action:**
  - Go to the Login page.
  - Enter valid email and password.
  - Click on "Login".
- **Expected Results:**
  - Login form is displayed.
  - Fields accept data without error.
  - User is logged in and redirected to the dashboard.
- **Type:** Happy Path

###### 3. TC03 – Sign Up with Existing Email

- **Action:**
  - Go to the Sign-Up page.
  - Enter a name and an already registered email.
  - Click on "Sign Up".
- **Expected Results:**

- Fields accept data.
- Error message "Email already registered" is displayed.
- **Type:** Error Path

#### 4. TC04 – Login with Wrong Password

- **Action:**
  - Go to the Login page.
  - Enter valid email and incorrect password.
  - Click on "Login".
- **Expected Results:**
  - Input is accepted.
  - Error message "Invalid username or password" is shown.
- **Type:** Error Path

### Test Suit: TS02 - View Playlists (ID: 87)

#### 1. TC05 – View Playlist Page

- **Action:**
  - Log in successfully.
  - Navigate to "My Playlists" section.
- **Expected Results:**
  - All created playlists are displayed clearly.
- **Type:** Happy Path

#### 2. TC06 – Playlist Loading Failure

- **Action:**
  - Disconnect from the internet.
  - Navigate to "My Playlists".
- **Expected Results:**
  - Network is offline.
  - Error message "Unable to load playlists" is shown.
- **Type:** Error Path

### Test Suit: TS03 - Real-Time Metadata (ID: 88)

#### 1. TC07 – Real-Time Metadata Display

- **Action:**
  - Play a song.
  - Observe the metadata panel.
- **Expected Results:**
  - Metadata (title, artist, album, duration) is displayed and updates in real time.
- **Type:** Happy Path

#### 2. TC08 – Metadata Not Updating

- **Action:**

- Play a different song.
  - Observe the metadata panel.
- **Expected Results:**
  - Metadata remains static or shows default/fallback message.
- **Type:** Error Path

#### **Test Suit: TS04 - Playlist Editing (ID: 89)**

##### **1. TC09 – Rename Playlist Successfully**

- **Action:**
  - Navigate to "My Playlists".
  - Click "Rename" next to a playlist.
  - Enter a new name and click "Save".
- **Expected Results:**
  - Playlist name updates successfully.
- **Type:** Happy Path

##### **2. TC10 – Rename with Blank Name**

- **Action:**
  - Click "Rename" on a playlist.
  - Leave the field blank.
  - Click "Save".
- **Expected Results:**
  - Error message "Playlist name cannot be empty" is shown.
- **Type:** Error Path

##### **3. TC11 – Change Playlist Order**

- **Action:**
  - Open a playlist.
  - Drag and drop songs to reorder.
  - Click "Save".
- **Expected Results:**
  - Playlist order is updated and saved.
- **Type:** Happy Path

##### **4. TC12 – Change Playlist Order Fails**

- **Action:**
  - Login and go to "My Playlists".
  - Select a playlist.
  - Go offline or simulate server error.
  - Reorder songs and click "Save Order".
- **Expected Results:**
  - Error message: "Failed to update order. Please check your connection".
- **Type:** Error Path

## Test Suit: TS05 - Smart Playlist Creation (ID: 90)

### 1. TC13 – Generate Playlist Based on Various Categories

- **Action:**
  - Login with valid credentials.
  - Click on "Generate Playlist".
  - Select categories.
  - Click "Generate Playlist".
- **Expected Results:**
  - Playlist is generated based on selected mood and categories.
- **Type:** Happy Path

### 2. TC14 – Fail to Generate Playlist Due to Missing Category Selection or Invalid Input

- **Action:**
  - Login with valid credentials.
  - Click on "Generate Playlist".
  - Select categories.
  - Click "Generate Playlist".
- **Expected Results:**
  - Error message: "Please select at least one valid category" or "No recommendations found for the selected filters".
- **Type:** Error Path

## **LOAD TESTING AND PERFORMANCE TESTING**

### **Aim:**

To create an Azure Load Testing resource and run a load test to evaluate the performance of a target endpoint.

### **Load Testing**

#### **Steps to Create an Azure Load Testing Resource:**

Before you run your first test, you need to create the Azure Load Testing resource:

1. Sign in to Azure Portal  
Go to <https://portal.azure.com> and log in.
2. Create the Resource
  - Go to *Create a resource* → Search for “Azure Load Testing”.
  - Select Azure Load Testing and click Create.
3. Fill in the Configuration Details
  - *Subscription*: Choose your Azure subscription.
  - *Resource Group*: Create new or select an existing one.
  - *Name*: Provide a unique name (no special characters).
  - *Location*: Choose the region for hosting the resource.
4. (Optional) Configure tags for categorization and billing.
5. Click Review + Create, then Create.
6. Once deployment is complete, click Go to resource.

#### **Steps to Create and Run a Load Test:**

Once your resource is ready:

1. Go to your Azure Load Testing resource and click Add HTTP requests > Create.
2. Basics Tab
  - *Test Name*: Provide a unique name.
  - *Description*: (Optional) Add test purpose.
  - *Run After Creation*: Keep checked.
3. Load Settings
  - *Test URL*: Enter the target endpoint (e.g., <https://yourapi.com/products>).
4. Click Review + Create → Create to start the test.
